VIBRATING SCREEN

VS Series

Hailstone vibrating screens are circular-motion inclined screens in two, three and four deck designs. Standard inclination degrees are selected depending on the size of the machine. The decks can be equipped with any kind of modern screening media of polyurethane and rubber, wire mesh or steel plate depending upon the material. Well positioned rotary shaft at its center of gravity gives the screen a motion that follows a circular profile at every point on the screen as it runs; result in excellent efficiency in all stages of crushing operations. Hailstone vibrating screens have shown themselves to be extremely reliable, economic, easy to use and suitable for most of the screening applications.
